Quality Policy

IQE is the world's leading supplier of advanced wafer products and material solutions to the semiconductor industry. We innovate, develop and manufacture a broad portfolio of products that are at the heart of the digital revolution and enable cutting edge technologies.

IQE has developed a reputation for excellence and reliability through technology leadership and proven mass market delivery, and our vision is to be the best advanced semiconductor material solutions company in the world. To enable this, IQE is committed to achieving the highest standard of Quality across all areas of our business and manufacturing processes, and delivering the highest quality products and services to our customers.

Our Quality review programmes involve data capture and traceability processes that enable us to effectively link customer data, characterisation processes and results in order to measure levels of service performance and customer satisfaction. As a business, IQE continues to meet and exceed our customer requirements as well as any local regulatory, legal and certification requirements.

IQE invests in employee training and development to ensure Quality Management Systems protocols are understood, and in order to continually review and improve our standards and levels of service.

Through clear management focus, technology leadership, operational excellence and continuous improvement, IQE is committed to achieving the highest standard in every aspect of its business.
